Shortness of breath

Diarrhea

Body or muscle aches

Headache

Fatigue and weakness

The Deutsch Institute will continue to monitor the CDC and ODP guidelines and will make any necessary changes if appropriate.

- People who are **not fully vaccinated** should follow all prevention measures until fully vaccinated. Preventive measures include getting vaccinated, wearing a mask, practicing physical distancing, and hand hygiene.
- ADSCs with people who are **fully vaccinated and people who are not fully vaccinated**, or with people whose **vaccination status is unknown**, should continue to use prevention strategies including mask use, physical distancing, ventilation by people who are not fully vaccinated, hand hygiene, respiratory etiquette, and other controls.

Consistent and correct mask use by people who are not fully vaccinated is especially important indoors and in crowded settings, when physical distancing cannot be maintained.

- **Indoors.** Mask use is recommended for people who are not fully vaccinated.
- **Outdoors.** In general, people do not need to wear masks when outdoors. However, particularly in areas of substantial to high transmission, CDC recommends that people who are not fully vaccinated wear a mask in crowded outdoor settings or during activities that involve sustained close contact with other people who are not fully vaccinated. If not, everyone is fully vaccinated, prioritize outdoor activities over indoor activities when possible.
